

Do you have flooding or runoff issues in your local area?

Surface water flooding can be intensified by:

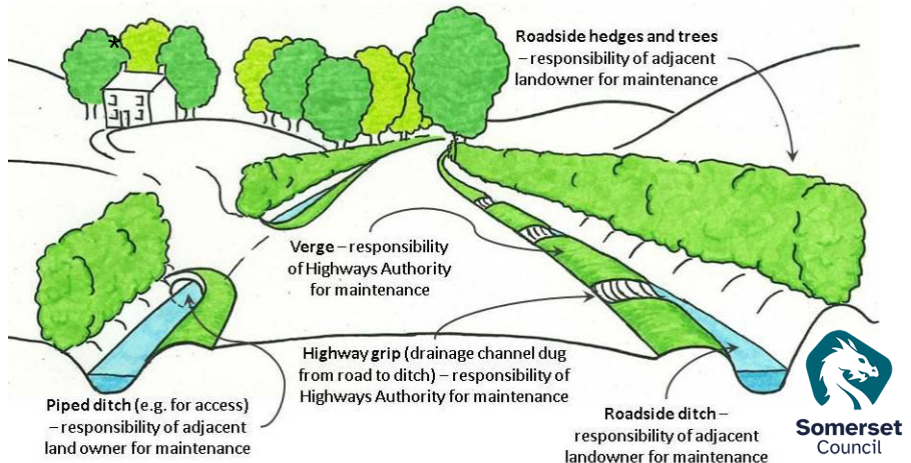

- Land management practices
- Blocked culverts/ drains
- Poorly maintained roadside ditches

Flooding interventions can be targeted towards 3 main areas, examples of each are given below:

Ditch Ownership and Maintenance Responsibilities

Advisers at FWAG SW can offer advice on these issues, along with funding opportunities through the Hills to Levels project. This project aims to approach flooding issues at the catchment scale, offering funding for schemes which 'slow the flow' of water and help to reduce flooding.
